

CerviXAI - Simple Run Commands

Use Windows Command Prompt. Run each command on its own line.

1. Start backend - every time

Open Command Prompt window 1:

```
cd /d D:\Cervical_Cancer_XAI
.venv\Scripts\activate
python -m uvicorn src.api:app --host 0.0.0.0 --port 8000
```

Keep this window open. You should see: Uvicorn running on http://0.0.0.0:8000

2. Connect phone - every time

Connect and unlock the phone. Open Command Prompt window 2:

```
set "ADB=C:\Users\user\AppData\Local\Android\Sdk\platform-tools\adb.exe"
"%ADB%" devices
"%ADB%" reverse tcp:8000 tcp:8000
```

The device must show as device. The reverse command should print 8000.

3. Open the app

Open CerviXAI normally from the phone icon. No frontend command is required.

Optional command to open it from the computer:

```
"%ADB%" shell am start -n com.ranjitha.cervicalcancerxai/.MainActivity
```

4. Only after changing Android code

Rebuild and install the updated app:

```
cd /d C:\Users\user\AndroidStudioProjects\CervicalCancerXAI
set "JAVA_HOME=C:\Program Files\Android\Android Studio\jbr"
gradlew.bat installDebug
"%ADB%" reverse tcp:8000 tcp:8000
```

5. Required API address

For the USB setup, ApiConfig.kt must use:

```
const val BASE_URL = "http://127.0.0.1:8000/"
```

6. Quick fixes

Problem	Commands / action
Device offline	"%ADB%" kill-server then "%ADB%" start-server
Device unauthorized	Unlock phone, reconnect USB, and accept Allow USB debugging.
Prediction fails	Confirm backend is running, then run adb reverse again.
JAVA_HOME error	set "JAVA_HOME=C:\Program Files\Android\Android Studio\jbr"
Test backend	curl "http://127.0.0.1:8000/cancer-report?patient_id=0"

Daily summary: Start backend, connect phone, run adb reverse, then open the app icon.
